

UBS EXHIBITING AT WORLD'S LARGEST ELECTRONIC MEDIA SHOW COFDM Modulator to be lead product exhibited at NAB2002

Las Vegas, Nevada & Toronto, Ontario (April 9, 2002) – Unique Broadband Systems (CDNX: UBS) is participating in this week's National Association of Broadcasters annual conference and exhibition in Las Vegas. The Company will be profiling its COFDM Modulator as well as a number of other products at the conference.

UBS' new sleek state-of-the-art DAB Modulator is the most compact unit on the market today. The innovative product is the result of extensive consultation with many of the world's premier DAB broadcasters. It has been designed exclusively to satisfy the needs of the professional broadcaster and incorporates robust and efficient RF modulation technology that provides superior coverage in non-line of sight situations. The basis for this and other leading UBS products is COFDM Modulation, which is resistant to multi-path interference, even in a mobile environment.

UBS will also be exhibiting its MMDS Transmitter, which is capable of transmitting between one to thirty-one analog or digital channels. This range of broadband transmitters can provide cost-effective omni-directional or sectored coverage for any size market. The Company's MMDS receiver, also on display at NAB2002, is designed for point-to-multipoint applications such as wireless Internet.

"It is important that UBS continue to participate in these important industry gatherings," said Gerald McGoey, Chairman of UBS. "Besides showcasing some of our leading-edge technology, this show affords us many networking opportunities within the industry. As the new Board of Directors completes its assessment of UBS' operations, the intelligence gathered at NAB2002 will be valuable as we assess the opportunities we have to maximize shareholder value."

NAB2002 is the world's leading conference and exhibition for the converging electronic media communications industries. Produced annually in April by the National Association of Broadcasters, The NAB Show delivers the most comprehensive showcase of digital communications technologies including every element of television and radio broadcasting, film/video production and post production, audio production, multimedia, the Internet, satellite and telecommunications.

About Unique Broadband Systems, Inc.
